

SMART ACCESS Facility Management IOT SOLUTIONS

Rest assured with every access controlled

Identification and health security are a growing concern as your Offices and Facilities need to be secure at all times.

Touchless Biometric

Use Facial Recognition Access Control to have a unique identification of each employee.

Body Temperature Detection

Avoid taking health risks and prevent disease transmission, by controlling your employees' temperature.

Alarmistic

React in a timely manner with the ability to integrate SMS and E-mail platforms to generate notifications for relevant managers when something is not compliant with your access guidelines.

SMART ACCESS

Facility Management

IOT SOLUTIONS

System Integration
With your already owned services and according to your defined users' access permissions

Touchless
Touch-free facial recognition and body temperature measurement

Growing security concerns can be addressed

In a world where there are security concerns related with identity check, data protection, diseases and virus spread, having control over your company offices's access is key to prevent unidentified persons to access your facilities and avoid turning it into an active focus of hazardous health risks.

Alerts Management
Define the events covered and when to receive an alert.

Our touchless Smart Access Solution securely and reliably provides:

- ✓ **Uniqueness of Access Control**
Our face is a unique characteristic that authenticates us thus making it difficult to fake physical facial recognition and improving access control to the company offices.
- ✓ **Risk control**
As scientifically recognized, one key symptom that signifies a potential health problem is an increased body temperature. As such, one way to reduce the risk of a disease outbreak in a company is to control the body temperature of those who have access to it.
- ✓ **Personal Data Protected**
Our solution doesn't use any personal data as every entry-exit record access, and all incidents, are registered under a generated identification code.

Report Generation
Manage your operation's progression to help you predict and prevent critical cases

Get in touch with us. We love a good challenge!
